Redwood (*Sequoia sempervirens*)

Comments: The "other" assemblage for this catalog number and several others in the feature is very distinctive. Most of the timbers are unusual types. Many are square- or rectangular-shaped in section, with an intact width and thickness, such as the 16 (7 g.) small chopstick-shaped timbers and 85 (46 g.) others that are slightly larger and sometimes longer (up to 9"). Although the original surfaces are abraded, they still retain their approximate original dimensions, even the length in some cases.

Total	29	81								

Redwood (*Sequoia sempervirens*)

Tool marks: --

Joints: --

Fixings and fittings: Ferrous nail. Ferrous band of metal has left corrosion marks on the composite wood/metal sheets.

Intentional marks: A notch is cut out of one of the timbers in the wood/metal sheets, possibly to fit another joining fixture.
